DETAIL SOLUTION "A" - Debowed connectors above the second layer of inorganic matrix

The layout, anchoring, and installation of the debowed connectors must be carried out only after the application of the second layer of inorganic matrix, embedded in the mortar or once the mortar has fully hardened.

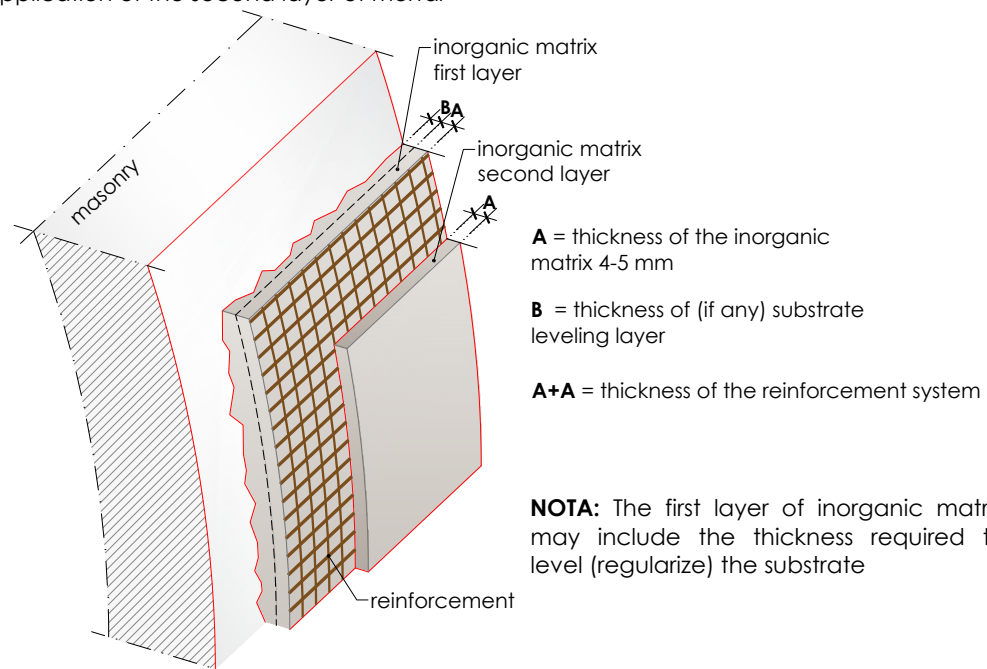

DETAIL SOLUTION "B" - Debowed connectors above the reinforcement

The layout and anchoring of the connectors must be carried out after Phase 0 of substrate preparation, while the installation of the debowed connectors is to be performed only after the reinforcement has been applied
